

EcoStruxure™ Automation Expert

Industrial enterprises today face a complex set of challenges as they strive to modernize operations. Transitioning to more agile and modern systems often comes with high costs and the risk of disrupting essential services. Many organizations are burdened by interconnected legacy infrastructure that makes integration of new technologies difficult. The convergence of operational technology (OT) and information technology (IT) adds further complexity, while a lack of system connectivity and compatibility hinders data flow and decision-making. On top of this, ongoing support and maintenance of aging systems continue to strain resources and limit innovation.

EcoStruxure Automation Expert is different.

It is an **open, software-defined automation solution** for industrial processes designed for more agile, resilient, sustainable, and efficient operations.

EcoStruxure Automation Expert puts flexibility first, giving you the power to automate on your terms. Whether you're integrating new tech with legacy systems, scaling operations, or preparing for AI, EcoStruxure Automation Expert's open, software-defined architecture lets you evolve without disruption. Increase efficiency, reduce costs, and gain real-time insights—all while staying in control. With EcoStruxure Automation Expert, business evolves at your pace.

What sets it apart

- **Boost efficiency and cut costs with an open architecture.** Hardware independence and an application-centric approach allows you to put control where it's most effective and scale without re-building.
- **Accelerate productivity and smarter decision-making with end-to-end digital continuity.** Data unification across business and production systems breaks down data silos fostering real-time data and insights.
- **Innovate at your own pace and maximize current investments.** Minimise risk and maximise ROI by upgrading incrementally and integrating new technologies such as AI and advanced analytics when you are ready.
